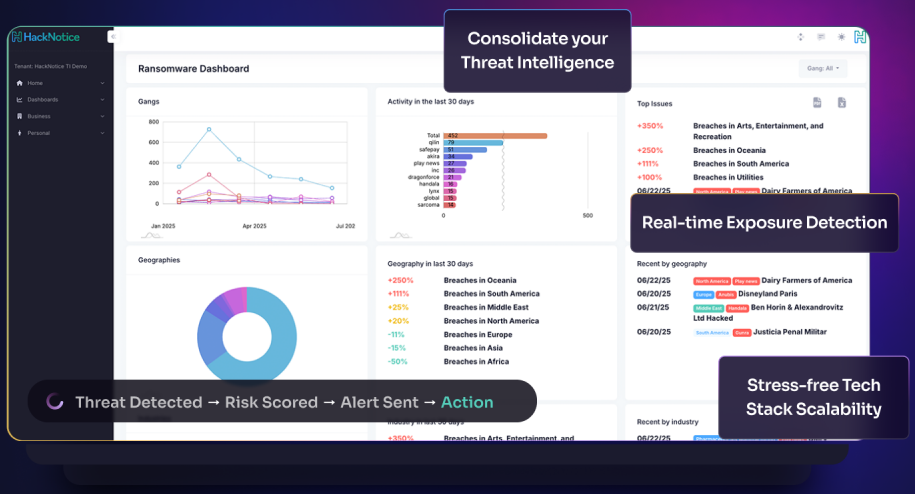
HackNotice

REAL TIME BREACHES & ATTACK DATA

Full-Spectrum Threat Intelligence For The Manufacturing Industry



Defend your systems, workforce, and production with continuous dark web intelligence tailored for fast-moving manufacturers.

Manufacturers are increasingly targeted by cybercriminals exploiting infostealer malware, leaked credentials, and vulnerable third-party vendors. Ransomware attacks don't just impact data—they halt production lines, disrupt distribution, and create cascading risk across global supply chains.

HackNotice delivers real-time threat intelligence to help manufacturers detect exposed data, identify compromised vendor relationships, and act quickly to contain threats. With continuous dark web monitoring and supply chain breach detection, security teams can reduce operational risk, minimize downtime, and protect valuable intellectual property from compromise.

Within days of onboarding, HackNotice will

- **Detect exposed credentials and data tied to infostealer malware targeting your workforce & suppliers.**
- **Provide real-time alerts on ransomware and data breaches affecting your supply chain.**
- **Reduce operational risk by detecting dark web exposure before it leads to production downtime or IP theft.**

Proactively mitigate dark web and supply chain threats with AI-Powered Threat Intelligence

Protect Workforce & Vendor Accounts

Monitor for leaked credentials from employees and suppliers that could enable access to operational systems, vendor portals, or proprietary data.

Minimize Downtime & Production Risk

Identify ransomware and third-party breaches early—helping you respond faster, prevent shutdowns, and maintain manufacturing uptime across the physical and digital supply chain.

Mitigate Employee Account Take Over

Identify when employee credentials are stolen by infostealer malware, helping prevent Business Email Compromise (BEC), internal fraud, and unauthorized access to financial systems.

Supply Chain Threat Monitoring

Continuously track breaches, ransomware attacks, and trafficked data related to your third-party vendors and partners, enabling risk-based prioritization and remediation.

"We've been really happy with the service. Last month alone, **you provided us with 12 actionable alerts.**"

Empowering security teams with the intel they need to prevent compromise across their user base, workforce, and digital ecosystem—all in real time and at scale.
